### Activities of Academic Associations

#### Botany Association

The ecological system of Indian continent is diversified and the constituent species of it are on the verge of extinction due to human interference, according to **Dr.S.Sridharan, the eminent Botanist and Controller of Examinations, Bharathidasan University.** Inaugurating the activities of Botany Association on 22<sup>nd</sup> September, Dr.Sridharan gave a special lecture on **Biodiversity conservation.** The recent survey indicated that our national animal, tiger, was routinely hunted by man and at present there were only 1441 animals available in India, he said.

The ecosystem of Tamilnadu is unique and diversified into terrestrial, tropical, marine and halophytic habitats. All these habitats are made of variety of organisms belonging to different groups of plants and specific species of animals, he said.

Quoting from his personal experience, he pointed out the *Equisetum sp.* at Perumalmalai, Kodaikanal, *Nepenthes sp.*, an insectivorous plant of Yercaud, Tiger's at Tiger Shola, Kodaikanal, Olive Riedly, a rare tortoise species from Orissa once existed as dominant forms have almost disappeared in the recent past. Elaborating on the global scenario, Dr.Sridharan, described how the bamboo eating herbivore,

Panda of China has come to the verge of extinction due to hunting. The natural calamities like forest fire frequently happening in places like US, Russia, Australia etc., act as an important ecological factor destroying the valuable vegetation of forest. Man also contributes to loss of vegetation by periodic felling of trees of forests for fuel and fire. "The conservation of diversified forms in different ecosystems is a necessity and there should be a balanced approach to achieve it" according to Dr.Sridharan. While forest resources and wealth from many ecosystems are needed for day to day existence of man, a comprehensive program has to be evolved to conserve the natural resources. In order to be successful, the rules and regulations concerning biodiversity conservation are first proposed, implemented, monitored, modified and further adopted, he said.
